DAVID GULLY

FULL STACK DEVELOPER

Over the course of my professional career, I have steadily evolved into a Full-Stack Developer. One of my earliest jobs was as a Graphic Designer, which then led me into Web Development. Over time, I became more interested in back-end programming and advanced my skills through self-study, college education, and experience. This has given me an advantage when it comes to design and development of software applications.

Georgia / USA / April 2014

Published: Self-Driving Vehicles
Omnino, VSU Undergrad
Georgia / USA / November 2014

Recognized for Exemplary Service
US Navy, Divert Support, E15
NAVSTA Rota / Spain / May 2010

WORK EXPERIENCE

Senior Software Engineer
Critical Network Solutions / 2020 – Present

Full-stack development of custom web apps for our clients. Responsible for every aspect of the software development process – all the way from initial requirements gathering to on-the-spot maintenance. Also, in charge of managing each project and keeping clients informed. Latest project is development of a SPA on Azure using Blazor server-side.

Director of Information Technology
The Christian Family Center / 2019 – 2020

Responsibilities included the management and optimization of IT resources, establishing and monitoring security protocols, maintenance scheduling, general training, and supervision of employees' resource usage. Redesigned the website and integration of social media platforms. Managed the reorganization and privileges of sensitive documents to remain HIPAA compliant. Instrumental in the facility re-certification process by ensuring preparation and procuring all required documents.

Software Engineer
Nexxtep Technology Services / 2014 – 2019

Managed and participated in the development and maintenance of software applications built using various programming languages, but primarily .NET. Additionally, oversaw the improvement of existing applications that were already in use and maintained legacy code. Met directly with clients for requirements gathering, job quoting, project planning, troubleshooting, and delivery. Supervised interns, assigned tasks, tutored, and code reviewed.

Back-End Developer
Ascend Inbound Marketing / 2016 – 2019

Developed API integrations for e-commerce websites built using the following technologies: HubSpot, WordPress, WooCommerce, Stitch Labs, Ship Station, Shopify, Zapier, and Databox. Custom HubL, ASP, PHP, JavaScript, jQuery, HTML, CSS, MySQL, SQL, JSON, XML. Middleware creation, modification and communication, OAuth and security implementation.

Computer Science Tutor
Valdosta State University / 2013 – 2014

Responsibilities included one-on-one interaction and instruction of various Computer Science subjects ranging from basic computer programming in Java to upper-level theory and concepts. Also, in charge of facilitating a weekly hour-long help session for the introductory programming courses.

VOLUNTEER ACTIVITIES

American Red Cross
Valdosta, Georgia
2017 – 2019

Hands on Network
Statesboro, Georgia
2011 – 2013
